

CIMCO is an industry leading developer of software solutions for Computer Integrated Manufacturing and Industry 4.0. Our software suite includes advanced CNC editors, simulation software, DNC communications software, Manufacturing Data Collection for real-time monitoring and analysis of shop floor productivity, and Manufacturing Data Management for managing, organizing and securely storing production related data.

Since 1991, CIMCO has helped companies worldwide improve their competitive edge by providing reliable software and outstanding on-site assistance. Our network of CAD/CAM/CNC resellers and consultants have sold more than 100,000 licenses worldwide and we hold great pride in continuously supporting and meeting our customers' demands by developing intelligent and competitive solutions.

NC program editing, simulation and machine communication

INTRODUCTION What is CIMCO Edit?

Built for CNC programmers who demand a full-featured editing, simulation and machine communication tool

CIMCO Edit comes with all the essential features needed for modern NC program editing including NC specific functions, math, transforms, drag/drop editing and more. In addition, CIMCO Edit includes the world's fastest GPU-accelerated backplotter, file compare, advanced Tool Manager, NC code assistant and can be extended with add-ons for machine simulation, NC program management, 2D CAD/CAM, viewing Mazatrol files and more.

BENEFITS

Why use CIMCO Edit?

Faster editing at PC

Work with NC programs on your PC, in a familiar Windows-based application instead of on complicated machine controls.

T Better Tool Management

Easily view and modify tools in your NC program for fast, iterative testing and simulation

Error-free code

Use code suggestions, syntax checking and error reports to help you write error-free NC code.

Transfers to/from machine

Manage program transfers to and from machines with reliable and configurable DNC RS-232 and FTP communications support.

Work smarter

Define associated objects such as workpiece, tools and holders directly in your NC programs for 1-click setup when simulating.

\iff Scalable and integrated

Proven in thousands of shops worldwide, powerful add-ons, and built for integration with external systems.

FEATURES

Some of the many features included

NC-Assistant

interface.

Essential editing tools

Comprehensive set of editing tools including line numbering, character handling, XYZ range finder, tool compensation, basic math, and more.

	G01 Linear move					
Param.	Description	Value	Default	Min.	Max	
х	X coordinate	-13.081				
Y	Y coordinate	26.919				
Z	Z coordinate					
	-13.08	IY26.	919			
TE ROIT						

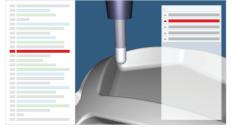

Program start	
Tool change	
Program end $-+$	_
Rapid move	
Linear move	-
CC/C type arc	

Cycles and Macros

Quickly insert and edit cycles and operations or record your own for the operations most common to your setup. Includes many built-in cycles and macros.

Backplot and Solid Simulation

Simulate your NC programs in 3D with the world's fastest 3,4,5 axis milling, turning and mill-turn C+Y axis backplotter. GPU-powered high-quality simulation of material removal, collision detection and more.

Simulation Report

All program errors are shown in the Simulation Report. Select an error and jump to the corresponding line. Modify the code and the Simulation Report verifies that the problem is resolved.

Track the initial and current state of variables in your NC program while the simulation is running or when selecting specific lines.

✓ Stop Conditions

Options to stop simulation at over travel limits, tool changes and collisions

- ✓ Scanning Commands Automate the loading of tools, geometry, work offsets, stock, and more.
- ✓ Geometry Manager

Tree view for overview and configuration of machine components.

 \mathcal{J} CAM Integrations Transfer data from supported CAM systems (Mastercam, SolidCAM).

✓ Free Online Courses

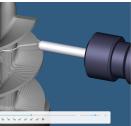

Online training courses for learning milling, turning, NC code, and more.

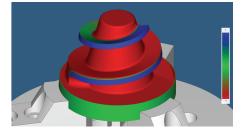

Point at any M or G code and the NC Assistant will identify the code and allow you to modify its values using an interactive

File Compare

The file compare identifies new, changed and deleted lines, but ignores trivial format changes such as block renumbering and spacing.

Stock Compare

Compare the simulated stock to the design model to easily identify inaccuracies. The stock is colored based on the distance to the design model.

Variable Watch

Machine Simulation Add-on

Prove-out your NC program on a 3D model of your CNC machine and see the exact movement of components such as heads, spindles, and even peripheral devices.
